

Food Waste Disposal Installation Tool Instructions

STEP 1

Apply plumber's putty evenly around the underside of the sink flange that came with your disposal. Line up and press down into the sink. Insert the **bolt** through the top of the clover, then place the **clover** into the sink flange.

STEP 2

On the center post of the **horseshoe**, stack in this order:

snap ring
mounting ring (with screw heads facing down)
backup flange (with the lip facing down)
fiber gasket

Then under the sink, slide the center post of the **horseshoe** onto the **bolt**. Screw the **nut** onto the **bolt**, and tighten until the ends of the horseshoe are firm against the bottom of the sink.

STEP 3

Slide the disposal pieces up onto the sink flange and insert the snap ring into the groove, securing everything in place. Tighten the three bolts on the mounting ring to secure the sink flange to the sink. **Unscrew the nut, remove the horseshoe, and you are ready to finish installation of the disposal per the manufacturer's instructions.**
